Note A layer group is not the same as a _layer collection_ (explained next) nor is it the same as a _layer stack_ (explained later on). Figure 2-5. The Layers panel offers a variety of tools for working with layers. Here you see the Layers panel in the Create new image window. When you select a layer to work with, you see the name of the layer next to the open editing tool. Use the swatches to change the color of the active layer. The area in the foreground of the image is not a layer. It's a background in which you'll add more layers. ## Moving Layers You can move layers that are visible or selected as described in the next sections. This list of Photoshop alternatives is a complete listing of every Photoshop alternative for professional image editors. These Photoshop alternatives are mostly extensions of Photoshop, with a few that are full Photoshop replacements. Most of the Photoshop alternatives for professional designers and web developers can also be used as a graphic design app. For most designers, they are already using one of these apps to edit their designs, so they can skip this entire guide. A few alternatives are also referred to as graphic design apps, and that's fine if you're a professional designer that works within the graphic design industry. Other notes: Most of these Photoshop alternatives are cross-platform so they can be used on Windows, macOS, Linux and your smartphone or tablet. If you're looking for a more general list of Photoshop alternatives, we suggest checking out this ultimate list of Photoshop alternatives. Photoshop Elements | Edit, Manage, Enhance & Design USD \$49.99 | Mac | Official Website • App Store A free alternative to Adobe Photoshop Elements is GIMP, which is a free, open-source alternative to Adobe Photoshop. GIMP can be downloaded for Windows, macOS, and Linux. Adobe PhotoDraw USD \$9.99 | Windows, macOS | Official Website • App Store Adobe PhotoDraw is a powerful graphics drawing app that rivals Photoshop in terms of features. It contains a few simple drawing tools, brushes and palettes, and is bundled with Adobe Photoshop in the main application. For designers and hobbyists, Adobe PhotoDraw is a cheaper alternative to Photoshop and can be downloaded for free. For designers, Adobe PhotoDraw is recommended over Photoshop because it is simpler to use. Photoshop is a complex graphics editing app and could be a bit confusing at first. 1. Field of the Invention The present invention relates generally to the field of corn breeding. In particular, the invention relates to corn seed and plants of the hybrid variety designated CH905858, and derivatives and tissue cultures thereof. 2. Description of Related Art The goal of field crop breeding is to combine various desirable traits in a single variety/hybrid. Such desirable traits include greater yield, better stalks, better roots, resistance to insecticides, herbicides, pests, and disease, tolerance to heat and drought, reduced time to crop maturity, better agronomic quality, higher nutritional value, and uniformity in germination times, stand establishment, growth rate, maturity, and fruit size. Breeding techniques take advantage of a plant's method of pollination. There are two general methods of pollination: a plant self-pollinates if pollen from one flower is transferred to the same or another flower of the same plant. A plant cross-pollinates if pollen comes to it from a flower on a different plant. Corn plants (*Zea mays* L.) can be bred by both self-pollination and cross-pollination. Both types of pollination involve the corn plant's flowers. Corn has separate male and female flowers on the same plant, located on the tassel and the ear, respectively. Natural pollination occurs in corn when wind blows pollen from the tassels to the silks that protrude from the tops of the ear shoot. Plants that have been self-pollinated and selected for type over many generations become homozygous at almost all gene loci and produce a uniform population of true breeding progeny, a homozygous plant. A cross between two such homozygous plants produces a uniform population of hybrid plants that are heterozygous for many gene loci. Conversely, a cross of two plants each heterozygous at a number of loci produces a population of hybrid plants that differ genetically and are not uniform. The resulting non-uniformity makes performance unpredictable. The development of uniform corn plant hybrids requires the development of homozygous inbred plants, the crossing of these inbred plants, and the evaluation of the crosses. Pedigree breeding and recurrent selection are examples of breeding methods used to develop hybrid parent plants from breeding populations. Those breeding methods combine the genetic backgrounds from two or more inbred plants or various other broad-based sources into breeding pools from which new inbred plants are developed by selfing and selection of desired phenotypes

What's New In Adobe Photoshop CC 2015?

Does a world without sun worship threaten life on Earth? A shocking discovery in a crater in South Africa may have the answer. Scientists discovered the world's oldest solar eclipse has occurred on earth at least four times in the past 1.7 billion years, suggesting that our planet may not be the only orb in the cosmos that bobs along on the celestial orb of the sun. The finding threatens to upend previous thinking that the solar system was static, with no changes occurring over the years — a conclusion based on ancient rock formations and mineral deposits on the moon and Mercury. "We think of the Earth as a special kind of place that is unlike most other planets in the solar system," said Jeff Czaja, director of geosciences at the Carnegie Institution for Science and the lead author of a study on the discovery published in the journal *Nature*. "The data we're collecting now suggests that the Sun has been circling the Earth since the formation of our solar system." The discovery was made by Czaja and a team of scientists using the South African National Space Agency's Visible and Infrared Survey Telescope for Astronomy. Using the diameter of Mercury, the scientists were able to calculate the size of the solar system at the time. "When we looked at what the size of the solar system was, we realized that just as the Earth formed in the inner solar system, the orbit of the Earth was also changing," Czaja said. "Instead of the Earth moving around the Sun and then the Sun around the Earth, the Earth was moving in the same direction as the Sun." Prior to this discovery, scientists believed that the Earth went around the sun approximately every 26,000 years, a pattern that has been in place for the past 4.6 billion years and is believed to have been in play for the past 300 million years. The discovery of the solar eclipse in the last 1.7 billion years changes all that, said Czaja, and calls for a re-evaluation of the origins of the solar system. "The story has always been that everything in the solar system originated together," Czaja said. "But, what we're seeing is that Earth, Mercury and the other planets are not necessarily all that old. They could be much younger." It is not yet known how much younger Earth is than the other planets. Scientists theorize that it could be anywhere from 100 million to 1 billion years. The
